

Tradify Documentation

Date: March 6, 2026

Prepared by: Kurt Russel De Asis

1. Introduction

This document records everything I have learned about Tradify so far, including the workflow structure, operational processes, and the step-by-step procedures required to operate the platform effectively.

The goal of this documentation is to create a clear reference guide that explains how Tradify functions within the operational workflow of a trade business. This includes customer management, quoting, job management, scheduling, invoicing, and payment recording.

This document is written from the perspective of someone learning the system from the ground up, with the intention of building a clear operational guide that can later be refined into a complete internal Standard Operating Procedure (SOP).

2. Company Overview

Tradify is a job management software platform designed specifically for trade businesses such as electrical, plumbing, HVAC, renewable energy installation, and general contracting services.

The system provides an end-to-end operational solution that allows businesses to manage their entire workflow from a single platform. Key operational areas supported by Tradify include:

- Customer relationship management
- Quote creation and approval
- Job scheduling and tracking
- Staff and contractor assignment
- Job costing and materials tracking
- Invoicing
- Payment tracking

- Accounting integration

Rather than relying on disconnected tools such as spreadsheets, emails, and manual paperwork, Tradify centralizes all operational activities into one system. This significantly reduces administrative overhead and improves visibility across ongoing projects.

Based on my current understanding as a user, Tradify appears particularly suitable for small to medium-sized trade businesses that require structured operational processes while maintaining ease of use and flexibility.

3. Workflow Structure

Tradify is structured around the lifecycle of a job.

The workflow follows a logical and sequential progression that ensures continuity of information throughout each operational stage.

The process begins with a **customer inquiry**, which is developed into a **formal quote**.

Once the quote is accepted, it is converted into an **active job** within the system.

The job is then **scheduled and executed**.

Upon completion of the work, the job is transformed into an **invoice**.

Payment is recorded against the invoice, and the financial data synchronizes with integrated accounting platforms such as Xero or QuickBooks.

Each stage flows directly into the next without requiring duplicate data entry, ensuring consistency, operational efficiency, and financial accuracy across the entire job lifecycle.

Here's a flowchart of the workflow structure based on my experience:

4. Tradify Dashboard Overview

The Tradify dashboard serves as the central control panel for managing daily operations.

From the dashboard, users can quickly access the main operational modules within the system.

Typical dashboard elements include:

- Jobs scheduled for the day
- Recent activity
- Outstanding quotes
- Unpaid invoices
- Notifications or reminders
- Quick access shortcuts to major modules

The dashboard provides a quick operational overview that allows users to monitor workflow progress and prioritize tasks accordingly.

5. Customer Management

Customer management is handled through the **Contacts module**.

Each contact entry contains essential information required for managing jobs and communications.

Typical customer information includes:

- Customer name
- Email address
- Phone number
- Service address
- Billing address
- Notes related to the customer
- Job history

Creating a customer record ensures that all future quotes, jobs, and invoices are associated with the correct contact profile.

Maintaining accurate contact records is important because it prevents duplication and ensures proper communication throughout the job lifecycle.

6. Quote Creation Process

Quotes are used to provide customers with an estimated cost for the requested work before the job begins.

Steps to Create a Quote

1. Navigate to the **Quotes** section in Tradify.
2. Click **Create New Quote**.
3. Select an existing customer or create a new contact.
4. Enter the job location and description of work.
5. Add line items representing labor, materials, or services.
6. Set quantities, unit costs, and markup if required.
7. Review the total estimated cost.
8. Save the quote.

Quotes can then be sent to customers via email directly through Tradify.

Once the customer reviews the quote, they can either approve or reject it.

7. Quote Approval and Conversion to Job

When a customer approves a quote, the quote can be converted into a job.

This conversion process transfers all relevant details automatically, including:

- Customer information
- Job description
- Cost estimates
- Materials and services listed in the quote

Steps to Convert a Quote to a Job

1. Open the approved quote.
2. Click **Convert to Job**.
3. Review the job details.

4. Assign a job status.
5. Save the job.

The job now becomes an active operational task within Tradify.

8. Job Management

Jobs represent the core operational unit in Tradify.

A job contains all information required to complete the work, including:

- Customer information
- Job location
- Scope of work
- Assigned technicians
- Materials required
- Job notes
- Attachments
- Cost tracking

Jobs can be updated throughout their lifecycle as work progresses.

9. Job Scheduling

Tradify includes a scheduling feature that allows managers to allocate jobs to technicians and set work dates.

Scheduling ensures that work is organized efficiently and technicians know where they need to be.

Scheduling Process

1. Open the job.
2. Select **Schedule Job**.
3. Assign a technician or team.
4. Set the job date and time.
5. Confirm the schedule.

Once scheduled, the job appears on the Tradify calendar and on the technician's mobile application.

10. Job Execution and Updates

During job execution, technicians can update job progress using the Tradify mobile app.

Common updates include:

- Time tracking
- Materials used
- Work notes
- Photos of completed work
- Customer signatures if required

These updates ensure that job records remain accurate and complete.

11. Job Completion

Once the work has been completed, the job status should be updated to **Completed**.

Before marking the job as complete, the following should be verified:

- All work tasks are finished
- Materials used are recorded
- Notes are added if necessary
- Any additional costs are included

Completing the job prepares it for the invoicing stage.

12. Invoicing Process

After a job is completed, an invoice can be generated.

Steps to Create an Invoice

1. Open the completed job.
2. Select **Create Invoice**.
3. Review the job details and charges.

4. Confirm pricing and taxes.
5. Save the invoice.

Invoices can then be sent to the customer via email.

13. Payment Recording

When a customer pays an invoice, the payment should be recorded within Tradify.

Steps to Record Payment

1. Open the invoice.
2. Select **Record Payment**.
3. Enter payment details such as:
 - Payment method
 - Payment date
 - Payment amount
4. Save the payment record.

Recording payments ensures that outstanding balances are updated and financial reports remain accurate.

14. Accounting Integration

Tradify can integrate with accounting software such as:

- **Xero**
- **QuickBooks**

This integration automatically synchronizes financial data such as invoices, payments, and customer information.

Benefits of accounting integration include:

- Reduced manual bookkeeping
- Improved financial accuracy

- Simplified tax preparation
- Real-time financial reporting

15. Best Practices for Using Tradify

Based on my current understanding, several best practices help ensure efficient use of the system:

1. Always create or verify the customer contact before generating quotes.
2. Use clear and descriptive job notes.
3. Ensure quotes are reviewed before sending to customers.
4. Update job status regularly to reflect real-time progress.
5. Record materials and costs accurately.
6. Generate invoices promptly after job completion.
7. Record payments immediately once received.

Following these practices helps maintain organized job records and ensures smooth operational workflows.

16. Conclusion

Tradify provides a structured and efficient platform for managing the complete lifecycle of trade jobs.

By integrating quoting, job management, scheduling, invoicing, and accounting synchronization into a single system, businesses are able to streamline their operations and maintain accurate records across all stages of their workflow.

Although I am still in the early stages of learning the system, this documentation represents my current understanding of how Tradify operates and how it should be used in a practical business environment.

As I continue gaining experience with the platform, this documentation will be expanded and refined to include deeper operational details, advanced features, and company-specific procedures.
